in a sphere, r = 14 mm
(c) Evaluation protocol
BCP: 423 scans, 208 subjects
69 tracts, 5,388 locations, 7 measures
Sample per seed:
20 scans per age bin
(at most half a bin)
5 folds by subject:
norm and models fitted
without the subject
3 rounds per scan, passes per round:
1: whole profiles (10% of tracts), gaps (20%,
3-15 mm), end gaps (20%, 1-8 mm)
2: all tracts through a sphere (r 10-25 mm)
3: one measure family; 4: a real mask
Impute with every setting
(same hidden values for all settings)
RMSE / RMSE of the age-bin mean per
pattern, measure, age bin; paired per scan
